Introduction	7
--------------------	---

1. MONITORING OUTLINE

What is monitoring?	9
What are indicators?	9
Why monitor native forest ecosystems?	9
What to monitor	9
When to monitor	10
Where to monitor	11
Precision	11
Sampling	13
Fieldwork – taking measurements in the forest	13
Data analysis and presentation	14
Data storage	15
A good monitoring system	15
Indicators and measurement methods	16

2. MONITORING TOOLBOX

Recording and measurement standards	17
Sources of measurement equipment & materials	18
Monitoring plan	19
General surveillance checklist for forest ecosystems	21
Ground photography to monitor forest canopy cover	25
Quick plot method for vegetation assessment	31
20m x 20m permanent vegetation plots	40
RECCE – for vegetation description	41
Foliar browse index for possum-related damage	43
Epicormic shoot counts	45
Cylinder intercept assessment of forest structure	49
Point intercept – for forest ground cover assessment	53
Flowering and fruiting observation record	57
Ground plot monitoring of seed and fruit-fall	62
Forest bird slow walk transects	68
Weed map monitoring	73
Possum percentage trap catch	77
Tracking tunnels for rodents and stoats	79
Rodent ‘gnaw block’ bait interference	83

3. UNDERSTANDING NATIVE FOREST MONITORING

Introduction To native forest monitoring	85
Why monitor native forest ecosystems?	85
So what are we talking about?	85
Designing a monitoring programme	86
Introduction	86
Why do you want to monitor?	86
What is the monitoring question?	87
What will you do with the answer?	88
How will you present the results?	88

What sort of difference needs to be detected?	88
Design monitoring to answer the question	88
General identification of issues and threats	88
Large difference	89
Small difference	89
What will you measure?	89
Select measurement methods	89
Where and when will you measure	90
Using marked or unmarked measurements	92
Appropriate sampling	92
Can you afford the monitoring design you have chosen?	92
Pilot trial of design	92

Sampling	95
How to select the sample?	95
What is precision?	96
What is bias?	96
What is the advantage of re-measuring marked plots or individuals?	97
When is it appropriate to use unmarked survey comparisons?	97
Breaking areas into blocks for sampling – stratification	97
What size sample?	98
What plot size?	99
Sampling different indicators on the same sites	100
Links to other regional and national sampling sites ..	100
Comparing treatment and non-treatment areas	101
Summary – sampling In practice	101

General notes on undertaking fieldwork

Always record sufficient information so others can repeat what you have done	102
Plot/sample point location	102
Marking sample points/plots so they can be relocated	102
Ensure you have a plan before you begin	102
Do a quick trial first	103
Ensure fieldworkers have adequate knowledge, training or supervision	103
Keep notes on field measurements	103
Checklist of field equipment	103
Use standard forms where possible	103
Always record key background data	103
Keep data tidy and safely stored	103

Analysis of data

Types of data	104
Data points, means, standard deviation and standard error	104
Comparison of datasets	105
Examining difference	106
Examining trend	106
Examining relationships	106
Fluctuations that ‘don’t mean anything’	107
Comparing data with regional and national datasets – relationships to the national indicators programme?	107

Records and data storage	108
Background forest information	108
Monitoring records	109
Databases	110

4. FOREST ECOSYSTEM INDICATORS & MEASUREMENT

Using Part 4	111
Indicators	111
Measurement methods	111
Listing of measurement methods in the text	111
Skill requirements	111
Measurement precision	111
Canopy cover and condition	112
The indicator	112
Measurement methods	113
Visual assessment	113
Point intercept	114
Line intercept	115
Ground photography	116
Aerial photography	117
Basal area	118
Understorey abundance	119
The indicator	119
Measurement methods	119
Vertical and horizontal vegetation structure	121
The indicator	121
Measurement methods	122
Point intercept	122
Visual assessment	122
Line intercept	123
Stereo photographs	123
Species composition and diversity	124
The indicator	124
Measurement methods	125
% composition	125
Species lists – species richness	125
Diversity indices	125
Abundance of ‘indicator’ species	127
The indicator	127
Measurement methods	128
Frequency – presence or absence	128
Density	129
Biomass	129
Cover	130
Distribution of key species/uncommon species	131
The indicator	131
Measurement methods	131
Mapping	132
Total counts/absolute cover	132
Flowering and fruiting of key species	133
The indicator	133
Measurement methods	133
Visual estimates	134
Seed-fall counts	134

Population structure	136
The indicator	136
Measurement methods	136
Height/size classes	137
Mortality	138
The indicator	138
Measurement methods	138
Death of marked trees	138
Change in total mortality over time	139
Litter-fall	140
The indicator	140
Measurement methods	140
Litter trays	140
Litter plots	141
Weed distribution	142
The indicator	142
Measurement methods	142
Weed abundance	143
The indicator	143
Measurement methods	143
Weed population structure	144
The indicator	144
Measurement methods	144
Weed mortality	144
The indicator	144
Measurement methods	144
Ground cover	145
The indicator	145
Measurement methods	145
Visual assessment	145
Point intercept	146
Bird distribution	147
The indicator	147
Measurement methods	147
Mapping locations of uncommon species	147
Mapping presence within grid squares	148
Bird abundance	148
The indicator	148
Measurement methods	149
Territory mapping	149
Capture rate in mist netting	149
Five-minute count	149
Distance sampling	150
Fixed area – ‘slow walk’ transects	150
Bird species composition and diversity	150
The indicator	150
Measurement methods	151
Bird population structure	151
The indicator	151
Measurement methods	151
Detailed population studies	151
Nesting success	151
Large vertebrate pest distribution	152
The indicator	152
Measurement methods	152

Large vertebrate pest abundance	153	Cat abundance	164
The indicator	153	The Indicator	164
Measurement methods	153	Measurement methods	164
Faecal pellet counts	153	All vertebrate pests – general comments	165
Hunter effort	154	Observation records	165
Hunted density	154	Visual assessments	165
Population model estimates	154	Invertebrates	166
Large vertebrate pest species population structure 155		The indicator	166
The indicator	155	Measurement methods	167
Measurement methods	155	Pit fall traps	167
Possum distribution	156	Malaise traps	167
The indicator	156	Climate	168
Measurement methods	157	The indicator	168
Possum abundance	157	Measurement methods	168
The indicator	157	Hydrological/drainage conditions	169
Measurement methods	157	The indicator	169
Faecal pellet counts	157	Measurement methods	169
Trap catch	157	References and additional reading	171
Trap to extinction	158		
Bait take	158		
Damage and sign indices	158		
Possum population structure	159		
The indicator	159		
Measurement methods	159		
Rodent abundance	160		
The indicator	160		
Measurement methods	161		
Tracking tunnels	161		
Trap catch	161		
Bait interference	161		
Stoat abundance	162		
The indicator	162		
Measurement methods	163		
Tracking tunnels	163		
Trap catch	163		

APPENDICES

1. Plant names used in the text	176
2. Plant species browsed by animal pests	177
3. Fruiting and flowering native plant species used by native birds	179
4. Flowering & fruiting periods for some plant species	181
5. Expected values for some indicator measurements	183
6. Random numbers	183

ACKNOWLEDGMENTS

This publication is the major outcome from a project which received financial support from the Minister for the Environment's Sustainable Management Fund, which is administered by the Ministry for the Environment.

The Wellington Regional Council, Natural Forests Department was the major partner in this project. The ongoing support of this organisation - from enthusiasm for the original idea, to the provision of direct assistance, staff time and field sites for trials is gratefully acknowledged.

The following organisations (listed alphabetically) also provided important support to the project in terms of early commitment for the project idea, and ongoing inputs of a mixture of direct assistance, staff time, and field sites for trials.

- Auckland Regional Council
- Canterbury Regional Council
- Department of Conservation - Wellington Conservancy, & Science and Research
- Environment Waikato
- QEII National Trust
- Palmerston North City Council

Acknowledgement of individual contributions is provided at the back of the publication.

The following organisations have contributed to a project that includes a reprint of this publication. This project has received financial support from the Minister for the Environment's Sustainable Management Fund, which is administered by the Ministry for the Environment. The Ministry for the Environment does not endorse or support the content of the publication in any way.
